

FINANCIAL SERVICES COMPANY CASE STUDY

Achieving Better Cloud Security Visibility
while Scaling for Business Growth

Technology from Senserva and SecureSky Extends Entitlement, Configuration and Compliance for Comprehensive Visibility in the Microsoft Cloud.

AT A GLANCE CHALLENGES

- COVID and business growth forced transformation to Cloud
- Requirement to meet NY DFS and other regulatory requirements
- Provide stringent cloud security

BENEFITS

- Enhance the security of the Microsoft cloud ecosystem
- Immediate ability to expand business without security or regulatory concessions
- Proactively pinpoint and remediate cloud security violations

BENEFITS

- *Exponentially growing the business without compromising security*
- *Enabling additional SaaS application growth with the reduced chance of a breach*
- *Building on Microsoft Sentinel to provide Automation that continually gathers, analyzes, and simulates security privileges in the Microsoft Cloud environment*
- *Ensuring compliance with NY DFS Part 500 and other regulatory requirements*
- *Proactively enforcing cloud security policies to support their remote workforce with less complexity and cost*

CHALLENGE

The combination of COVID and unprecedented business growth forced the digital transformation of a financial services company into migrating their data center to the Microsoft Cloud environment with no time to spare. In addition to the challenges of COVID and business expansion, employees were forced to work from home, thus the need to meet more stringent cloud security requirements and emerging regulatory compliance from the New York Department of Financial Services (NY DFS) with limited business impact.

SOLUTION

Senserva along with SecureSky provides solutions that enhance the security of the Microsoft Cloud environment and the ecosystem of other third-party management solutions. Using Senserva's continuous monitoring technology, the company is able to extend the level of visibility into its cloud security posture. This allows them to proactively pinpoint and respond to entitlement violations (unauthorized access & rights abuse), comply with NY DFS Part 500 and other compliance regulations, database security and configuration changes.
