*Perplexity isn't an LLM, it uses models from ChatGPT, Claude, Gemini, & DeepSeek, etc. behind the scenes. It's included because its search & research features are very useful, especially for real-time answers.

**Some models & features listed may only be available on paid plans or through APIs.

***There may be errors in the above chart. This landscape is changing fast—models improve, release new versions, or shift features often.
